

Green Arabia

Human Prehistory at the Cross-roads of Continents

3 Day Conference

**2-4 April, 2014: St John's College,
University of Oxford, UK**

Climate change has played a pivotal role in the demographic history of human populations across the world. However, earth scientists, archaeologists and geneticists are increasingly finding that the relationship between environmental change and human history is both variable and complex. This exciting interdisciplinary conference will address what we know about human dispersal, adaptation and the role of climate change through the following themes:

- Climate Change and Demography
- Behavioural Responses to Environmental Change
- Recording the Past: New Models, Methods and Discoveries
- Bridges, Barriers and Habitats: Arabia and Beyond
